ENVIRONMENTAL CONCERNS

Fluorescent and high intensity discharge lamps such as mercury vapor, metal halide and high-pressure sodium, all contain mercury. When mercury-containing products are placed in the trash, the mercury is released into the environment from waste incinerators and landfills. Some states, such as Minnesota, have banned all mercury from the solid waste stream.

The **Universal Waste Rule (UWR)**, effective January 6, 2000, reduces the cost and regulatory burden on generators who recycle.

- Exempts whole lamps from the hazardous waste manifest requirements.
- Does not require analytical testing or reporting of whole lamps destined for recycling.
- Allows the use of a common carrier instead of a certified hazardous waste hauler for shipment to a recycling facility.
- Allows generators and handlers to store lamps in any amount up to one year.
- Imposes minimal training and labeling requirements on generators and handlers.

ABOUT OUR COMPANY

Mercury Technologies of Minnesota is a full service, fully permitted fluorescent lamp recycling facility with complete mercury recovery on site. We are one of the oldest companies in this industry, having incorporated in 1992.

Woman-Owned Small Business

Certified HUBZone Concern

Proprietary Lamp Storage Containers

LAMP MANAGEMENT

Small Quantity Generators: We have a convenient **prepaid recycling program designed** to meet the needs of small quantity generators. One fee includes the container, all shipping charges, and recycling in full EPA compliance. For more information about this program, please request **Form No. BX1**.

Large Quantity Generators: Our proprietary, reusable **lamp storage drums** are a convenient and economical way to store and transport large quantities of used fluorescent lamps in full EPA compliance. The drums are available in three sizes and will accommodate lamps up to eight feet in length. For more information, please request **Form No. DR1**.

We provide **transportation services** throughout the upper Midwest and are properly licensed and insured for hazardous waste. Clients in other areas may arrange their own transportation utilizing a common carrier, or have us make the arrangements.

A **Certificate of Recycling** will be provided once the lamps have been processed. For our lamp processing fees and conditions for services and pricing, please request **Form No. FE1**.
